

Applied Generative AI

Session 1 - Assignment & Assessment

Total Marks: 100

Part A - MCQs (10 Marks)

1. Traditional Programming follows:
a) Data b) Rules c) Neural Networks d) APIs
2. Machine Learning learns from:
a) Rules b) Data c) APIs d) Databases
3. Transformer introduced:
a) CNN b) RNN c) Attention d) Decision Tree
4. GPT mainly performs:
a) Search b) Next-token prediction c) SQL d) Sorting
5. Llama is:
a) Closed b) Open Model c) Database d) Search Engine

Part B - Short Answers (20 Marks)

Answer any FIVE:

1. Explain Artificial Intelligence with examples.
2. Differentiate Traditional Programming and Machine Learning.
3. What is Deep Learning?
4. Explain Transformers.
5. What are Foundation Models?
6. Open vs Closed Models.

Part C - Practical Activities (30 Marks)

Activity 1: Compare responses from two AI tools for the prompt 'Explain AI to a 12-year-old.'

Use ChatGPT, Gemini, or another AI tool.

Compare:

- Response quality
- Clarity
- Examples used
- Response length

Write a 150–200 word conclusion.

Activity 3: Prompt Engineering Basics (15 Marks)

Ask the AI these four prompts:

- Explain Machine Learning.
- Explain Machine Learning in simple language.
- Explain Machine Learning using a real-life example.
- Explain Machine Learning as if I am a Class 8 student.

Write 5 observations about how changing the prompt affects the response.

Activity 3: Identify 10 applications or websites that use Artificial Intelligence.

Create a table with:

- Application Name
- AI Feature
- How it improves the user experience

Part D - Research Assignment (20 Marks)

1. Compare GPT, Gemini, Claude and Llama (Developer, Open/Closed, Strengths, Use Cases).
2. Explain how Generative AI could improve three applications you use regularly.

Part E - Reflection (20 Marks)

Write 300–500 words on: 'How will Generative AI change software development and everyday life over the next five years?'
